It's Not a Home
Until It's Planted

We are equipped and have the stock to handle any size landscape or planting job from the humblest home with a few plants, to the largest mansion with large grounds with an elaborate planting.

PEACH TREES

BELOW we list a few of the leading standard varieties of fruit trees, the majority of which we have tested out and found to be best for this locality. If the variety you want is not listed, write us. If we do not have it will get same for you if obtainable.

Throughout the South, on most any kind of soil, peaches thrive and bear abundant crops of one of the best fruits obtainable. Every home should have at least enough for home use. In most places, peaches will pay better in commercial orchards than most anything we can plant.

Nursery stock is very scarce this season, especially peach in the larger sizes. If you intend planting this season it is advisable that you place your order as early as possible. If not yet ready for the stock, have it reserved for you to be shipped later.

Varieties marked H-C are both home and commercial; those marked H are good for home use and C are commercial use.

The figures () denote ripening dates as (6-1) June 1st.

PRICES

| | | | |
|--------------------------------|-------------------|-----|---------|
| 18 to 24 inches, each 15c..... | Dozen \$1.50..... | 100 | \$12.00 |
| 2 to 3 feet, each 20c..... | Dozen 2.00..... | 100 | 16.00 |
| 3 to 4 feet, each 25c..... | Dozen 2.50..... | 100 | 20.00 |
| 4 to 5 feet, each 35c..... | Dozen 3.50..... | 100 | 28.00 |
| 5 to 6 feet, each 40c..... | Dozen 4.00..... | 100 | 32.00 |

EXTRA STRONG, TWO AND THREE YEAR, QUICK BEARING

| | | | |
|--------------------------------|-------------------|-----|---------|
| 6 to 7 feet..... each 50c..... | Dozen \$5.00..... | 100 | \$40.00 |
| 7 feet up..... each 75c..... | Dozen 7.50..... | 100 | 60.00 |

We recommend planting of the sizes above but we have the following small trees in most varieties, which are good trees, true to name and just as clean and healthy as the larger, but smaller and perhaps would take some extra care.

| | | | |
|--------------------------------|-------------------|-----|---------|
| 12 to 18 inches, each 12c..... | Dozen \$1.20..... | 100 | \$10.00 |
| 6 to 12 inches, each 10c..... | Dozen 1.00..... | 100 | 8.00 |

ARP BEAUTY (6-1). Early. Yellow with bright bluish, semi-cling, a juicy, excellent peach of unusually good flavor. (H).

AUGBERT (8-20). A freestone very similar to Elberta but later in ripening. Considered much superior by some. (H-C).

BEAUTY (6-15). Extremely hardy, ripens with the Golden Jubilee, about the same quality, but is semi-cling instead of freestone. (H-C).

BELLE OF GEORGIA (7-10). One of the best flavored white freestone peaches. Fine for canning. Very prolific. (H-C).

EARLY ELBERTA (7-5). Same as Elberta, only 10 days earlier. (H-C).

EARLY WHEELER (5-20). Red cheek, showy, white flesh, cling, one of the best early commercial peaches. (C).

ELBERTA (7-15). Large size; deep yellow, splashed with crimson; perfect freestone, vigorous and highly productive; last of July, most popular peach. (H-C).

ELBERTA CLING (7-15). A duplicate of Elberta except it is a cling; large yellow with bright red cheek. (H-C).

EARLY ROSE (6-1). White cling. Sure and regular bearer; is inclined to overbear; should be thinned or the fruit is sometimes small. But if thinned is good size. It is always easier to thin than to put fruit on the trees. Quality better than Wheeler. (H-C).

FRANK (8-20). Extra fine quality, large yellow cling, ripens just after the Elberta, when good peaches are scarce and the demand is good. Regular bearer, has not made a failure here in 30 years. One of the best commercial varieties. (H-C).

GENERAL LEE (7-10). Red cheek, white flesh, cling. Fine peach. Tree splendid bearer. (H-C).

GOLDEN JUBILEE (6-15). High quality, early, yellow, freestone, ripening in June when peaches are in demand, typical Elberta type but 30 days earlier. Later blooming, thus insuring a regular crop. Good size quality, highly colored, tree unusually hardy, very firm, yet tender fleshed and melting. Good shipper. (H-C).

GOLD STANDARD

GOLD STANDARD (8-10). This peach originated from a chance seedling in the nursery rows of one of our largest and best pioneer fruit growers of this section. Has never failed to produce since the mother tree bore its fruit in 1896. Beautiful golden with a lot of red, almost perfectly round; if not overloaded, extra large, but has a tendency to overbear in which case is medium size. Firm, but tender texture. Highly flavored, the best canning, preserving, drying and sweet pickling peach we have ever tried. I remember my father, a pioneer fruit and berry grower, bought these peaches from the originator before his large orchard came into bearing more than 40 years ago, and I have never seen a better peach for any purpose. This peach is one of the best shippers. We will not have any trees larger than 4 to 5 ft. this year. Prices 25c per tree higher than standard varieties when ordered alone. H-C.

Below we give some of its history and what others who have known the Gold Standard for years think of it.

Cleburne, Texas
August 21, 1939

Mr. Creed Friou,
Cleburne, Texas.

Dear Sir:

I like Gold Standard peaches because I think they are the best all purpose peach of the twenty varieties I have in my orchard. They are good for canning, preserving and sweet pickles and are a good shipper. They originated on a farm less than one mile from me.

Very truly yours,

R. B. Beasley,
Rt. 4,
Cleburne, Texas.

Mr. Creed Friou
Cleburne, Texas
Friend Creed:

As per our conversation as to the origin of "Fines Gold Standard Peach" will state the above mentioned peach originated in my father's nursery stock about 1890; had its first crop of fruit in 1896. My father being a Gold Standard man, hence the name "Gold Standard" was given the peach.

We propagated the peach and it was considered one of the best cling peaches that has ever been grown in this climate. Being an acclimated peach, they are very prolific bearers and have never failed in any year to make a full crop since 1896, the year the mother tree bore its first crop. This makes it one of the best all around peaches to be planted in Central Texas.

Your friend,

J. C. Fine.

Cleburne, Texas
August 20, 1939

Mr. Creed Friou,
City.

Dear Sir:

In reply to your request for my opinion of the Gold Standard Peach, will state I have been selling fruit in Cleburne for the past 3 years and have known the Gold Standard Peach 2 years.

I consider it the best selling peach of any variety I have ever sold. Elbertas and other fine varieties may get to where they sell slow to the retail trade but we never have enough Gold Standard to go around, and truckers always want more than we have. They consider it the best hauling peach they can get.

My trade considers it the best peach we can get for all family uses.

Respectfully,

G. E. Leck.

J. H. HALE (8-20). Red-carmine-yellow overlaid; deep yellow flesh, firm and fine grained; freestone, delicious flavor; exceptionally large size. (H-C).

HART CLING (8-1). The best white cling for August. Free and regular bearer. Extra large, quality the best. (H-C).

HILEY BELLE (6-25). Extra fine quality, white freestone with red cheek, very prolific and regular bearer. Ripens same time as Mamie Ross, but much better in appearance and quality. (H-C).

INDIAN CLING. (8-1). Large, skin mottled with deep red; flesh rich and juicy, hardy; clingstone. Favorite pickling peach. (H-C).

LEONA (7-10). Large yellow freestone. Similar to Elberta. Prolific.

MAMIE ROSS (6-25). Extremely hardy and productive, known as "Cream and Sugar peach." Semcling; cream colored, flesh tinged red near seed. Tender, juicy and sweet.

MAYFLOWER (5-15). The first peach to ripen, and therefore much desired. White medium cling with red cheek. (H-C).

RED BIRD. (5-30). Practically same as Early Wheeler, except some better color. Seed does not burst. Some better flavor. (C).

SHIPPERS LATE RED (8-1). An extra large, very red, yellow freestone peach that ripens just as the Elberta and J. H. Hale are going out, when most everybody wants peaches, most anyone would think they are Elbertas or Hales, but better flavor and shipper than either and heavier bearer. One prominent nurseryman told me where they were known he could not sell Elbertas or Hales. (H-C).

STINSON (10-15). Our best late peaches; white with red cheek. Clingstone. Good flavor.

PLUM TREES

YEARS ago you did not expect to buy a good fruit tree for less than 75c, and they are still worth that, but in the past few years, the public has been offered trees at extremely low prices; in most instances inferior in quality. Remember a worthless tree occupies as much space as a good one and it takes two or more years to find out that it is not good, and the difference in the price is very little now. Do not be misled into buying puny, undersized, inferior trees that will be a disappointment to you, just to save a few pennies on the first cost.

Prices on Plums, Apricots, and Apples, except where noted:

| | | | |
|----------------------------|--------------------|-----|---------|
| 2 to 3 feet, each 25c..... | Dozen \$ 2.50..... | 100 | \$20.00 |
| 3 to 4 feet, each 35c..... | Dozen 3.50..... | 100 | 28.00 |
| 4 to 5 feet, each 40c..... | Dozen 4.00..... | 100 | 32.00 |
| 5 to 6 feet, each 50c..... | Dozen 5.00..... | 100 | 40.00 |

EXTRA STRONG, TWO YEAR, QUICK BEARING

| | | | | |
|-------------------|---------------|--------------------|-----|---------|
| 6 to 7 feet | each 75c..... | Dozen \$ 7.50..... | 100 | \$60.00 |
| 7 feet up | each \$1..... | Dozen 10.00..... | 100 | 80.00 |

ABUNDANCE BOTAN. (6-15). Tree beautiful upright grower, extra heavy bearer, hence its name. Bright red, yellow flesh, delicious flavor. (H-C).

AMERICA. (6-20). Tree rather spreading, loaded down with beautiful yellow fruit, very tart, fine for cooking in jellies, preserves or canning, will stand on tree longer than any variety we know. When fully ripe, the fruit is red, but usually sold and used when yellow, much better then. (H-C).

BRUCE (6-10). A hybrid variety; large, red productive. Especially good in West Texas. Unusually resistant to worms. The best early plum. (H-C).

BURBANK. (6-20). Tree rather ragged, spreading open grower, very prolific, usually overbearing, sometimes causing the tree to not last long. Should be pruned heavily and thinned, one of the best commercial red plums, extra good flavor. (H-C).

GAITHER. (7-15). Golden yellow large, productive, sweet, has not failed in 15 years to make a crop in this locality. (H-C). We positively guarantee this plum to give satisfaction under any condition or will refund money paid for trees. (H-C).

GOLD. (6-20). Very much like America. Fruit more round, shows red sooner and gets soft when red. Will not hold on trees as late as America, nor does it bear quite as much. (H-C).

RED JUNE. (6-15). Upright grower. Bright cherry red fruit fine for any purpose. One of the most productive, should be planted more extensively. (H-C).

SIX WEEKS. (5-10). Earliest; large; brilliant red; flesh pink; stone small. Tree vigorous; upright, grows well in all locations.

CHERRY PLUMS

(Same Price as Plums.)

CHERRIES do not prove very productive in this locality, but the following which are hybrids with cherries, plum and apricots have the cherry flavor and plum productiveness. I have seen these trees overloaded with finest of fruit when peaches and plums were a complete failure. They are extra good for fresh fruit, make pies that taste like cherry pies and jelly that cannot be beat.

WANETA. (8-10). The latest, fine quality, very productive, red skin, green flesh. (H-C).

COMPASS. (7-1). One of the nicest trees to use for home planting. Bears heavy, often bearing the first year. Likes plenty of water. Cross between cherry and plum. Bright red, good for eating or canning. (H-C).

OPATA. (6-20). Medium; purple-red splashed with green. Clingstone. A gorgeous sight in bloom—bears fruit first year after planting. Sweet and juicy. (H-C).

SAPA. (7-1). Somewhat dwarfish, thrifty; fruit large, dark purple with greenish splotches; flesh rich, dark purple-red, of rich flavor, small pit. (H-C).

We have the following sizes in some variety plums. In ordering these smaller trees write whether or not we may substitute as we may not have the variety ordered.

| | | | |
|--------------------------------|-------------------|-----|---------|
| 18 to 24 inches, each 20c..... | Dozen \$2.00..... | 100 | \$16.00 |
| 12 to 18 inches, each 15c..... | Dozen 1.50..... | 100 | 12.00 |
| 6 to 12 inches, each 10c..... | Dozen 1.00..... | 100 | 8.00 |

CHERRY TREES

| | | | |
|----------------------------------|-------------------|-----|---------|
| 2 to 3 feet light; each 30c..... | Dozen \$3.00..... | 100 | \$24.00 |
| 2 to 3 feet heavy; each 50c..... | Dozen 5.00..... | 100 | 40.00 |
| 3 to 4 feet; each 75c..... | Dozen 7.50..... | 100 | 60.00 |

EARLY RICHMOND. (5-25). Best fruit. Dark red; acid; good quality. One of the best varieties for the Southwest.

MONTMORENCY. (6-10). Generally known as the best sour Cherry. The trees are the cleanest, best growing, and least susceptible to disease. Fruit is

bright red, medium to large, with fine acid flavor. Ship well. Marketable everywhere.

NEW CENTURY. (6-1). Medium to large; light red; of good quality. Strong, only real cherry that will grow in this section of the country. Should be in every home or orchard. Prune to make branches shade trunk.

PEAR TREES

| | | | |
|----------------------------|-------------------|-----|---------|
| 2 to 3 feet, each 30c..... | Dozen \$3.00..... | 100 | \$24.00 |
| 3 to 4 feet, each 40c..... | Dozen 4.00..... | 100 | 32.00 |
| 4 to 5 feet, each 50c..... | Dozen 5.00..... | 100 | 40.00 |
| 5 to 6 feet, each 60c..... | Dozen 6.00..... | 100 | 48.00 |
| 6 to 7 feet, each 75c..... | Dozen 7.50..... | 100 | 60.00 |

EARLY HARVEST. (6-15). Early sweet pear. (H-C).

GARBER. (8-1). Fruit is large, yellow; keeps remarkably well—should be planted in connection with Keiffer to insure best results.

KEIFFER. (9-15). Fruit large with rusty cheek; flesh crisp and juicy. Good for preserves and cooking. Tree vigorous. Best known of the hard pear type.

LE CONTE (8-1). Creamy yellow, sweet. (H-C).

DOUGLASS. (9-1). Blight proof, youngest bearing pear. Usually bears the second year. Blooms late, escapes frost, usually overloads. Fruit large, if tree not to heavily loaded. Highly flavored; no hard gritty substance. Well colored, good all purpose; the best pear yet introduced. This pear will ripen on the tree or can be gathered and stored away and will mellow. It is the best flavored pear to be found for fresh eating; fine for preserving and canning when gathered before too ripe. This pear will bear enough fruit to pay for the tree before any other pear will come into bearing.

small pears and left 38 on it which have grown to maturity. They are all large size, smooth and uniform. I recommend it very highly.

Respectfully,
R. H. Nickell,
205 Moon Avenue,
Cleburne, Texas.

Alvarado, Texas,
September 2nd, 1935

Mr. Creed Friou
Cleburne, Texas

Dear Sir:

I find your fruit trees to be the very best. I have several dozen of your trees, including plums, peaches and pears. They give heavy yields, having highly delicious flavor.

I have one pear tree four years old from which I will gather as much as three bushels of fruit this year. This pear is large, well formed and is very delicious for eating or canning.

I wish to state that I am well pleased with your stock.

Yours for success,
Mrs. L. J. Bledsoe.

(NOTE. The pear tree referred to above is the DOUGLASS.)

Just a few expressions from our friends to whom we have sold the Douglass.

Cleburne, Texas
Sept. 9th, 1935

Mr. Creed Friou
Cleburne, Texas,
Dear Sir:

In January 1933, I bought a Douglass Pear from you. On account of being so late in the season and the hot summer it grew very little the first year. Last year despite the dry summer it grew well but did not bloom.

This year the buds did not show on it until my Keiffer had already shed its bloom. I pulled 102

These folks paid me \$1.50 for these trees which were 2-3 ft. sizes. They know they got a bargain. They will not cost you that much but are still the cheapest pear tree you could buy if they were \$2.00 per tree. They are 65¢ per tree and up according to size when bought alone. With other pear trees same price as others.

APRICOT TREES

(For prices see Plums)

CLUSTER. (6-1). Medium size; golden yellow, excellent flavor. Originated in Texas from seed of Russian Apricot. Seems more frost resistant. (H-C).

EARLY GOLDEN. (5-25). Medium size; yellow with red cheek. Thrifty grower, consistent bearer. Earliest. (H-C).

MOORPARK. (6-15). Large; yellowish-green with dull red on sunny side; marked with dark flecks, flesh bright orange, separating easily from seed. Fine for canning and drying. Tree vigorous and prolific. (H-C).

NEVERFAIL. (6-1). Everyone likes Apricots. The problem with fruit growers in this section is to get a variety that will produce fruit. All standard varieties we have tried have a tendency to bloom out too soon and the late freezes usually get the fruit resulting in us having a fine beautiful semetrical tree without much if any fruit. We have been on the lookout for a variety that will not only grow a beautiful tree but produce fruit. We found this Apricot in an orchard bearing persistently where other varieties were failing. The original tree from

which we got our start lived to be 33 years old and died with a full crop of fruit. Our first generation proved, if anything better than the original, larger better flavor and so far just as prolific as the original. Supply limited. We recommend this variety. Large, golden yellow, red cheek, highly flavored; no stringy fiber. If this variety ordered alone, 10¢ above standard price.

SURECROPPER. (6-10). About 30 years ago I sold an order of 12 Apricot trees to the late Mr. Hill Seat of 4 miles east of Cleburne. In this lot of trees were two trees that had the outstanding quality of constantly producing bumper crops of the very best grade, large, highly colored, delicious fruit. Other varieties in the same orchard and locality failed because of late freezes. The tree from which we got our buds was blown down by a storm about 10 years ago, but continued bearing for about 7 years, laying on its side. Never failed to produce some fruit from the time it was three years old until it died three years ago. Beautiful golden color, highly flavored, not stringy. If not overloaded, large size. If these trees are ordered alone, the price is 10¢ per tree above standard price.

APPLE TREES

(For prices see Plums. Yellow and Double Red Delicious 10¢ per tree higher than standard when ordered alone).

DELICIOUS. (9-1). Late fall. Fruit large, oblong, bright red with yellow; flesh crisp, juicy, sweet and delicious. (H-C).

DOUBLE RED DELICIOUS. (9-1). Same as regular delicious in size and flavor but is rich red in color. (H-C).

EARLY HARVEST. (6-10). Tender, sub-acid. (H).

JOHNATHAN. (8-10). Brilliant red. (H-C).

RED JUNE. (6-15). Red, tender, juicy. (H).

TRANSCENDENT CRABAPPLE. (8-1). Medium size; pleasant flavor; yellow partly covered with

red; very hardy. Medium bright straw-color; flesh tender, sub-acid; fine for jellies and preserves—makes a very good shade tree. Should be planted to pollinize delicious.

YELLOW DELICIOUS. (9-1). Large as regular delicious, golden yellow. Extra fine flavor, young bearing, long keeper. (H-C).

YELLOW TRANSPARENT. (7-1). Good early variety, rather tender, skin bruises easily but good for home use. (H).

KING DAVID. (9-1). An extra good, bright red, juicy firm yet tender apple for this locality. (H-C).

Our trees have lots of fibrous roots; they will live and thrive where inferior stock fails.

GRAPE VINES

PRICES: Each 20¢ 12 for \$2.00; 100 for \$12.50.

AMERICA—Black, good table grape.

CARMAN—One of best for all sections. Fine eating and for juice. Ripens more evenly than most; blue skin; perfect self-pollinator.

CONCORD—Ripens August 15 to September. Large, thick, black hull—juicy with foxy flavor. Best known. Good shipper.

EDNA—Clear, white, muscat flavor.

ELLEN SCOTT—Round, large grape; dark blue. Well-shouldered clusters. Ripens in August.

FERN—Dark red sprightly flavor.

MOORE'S EARLY—Black, similar to Concord in color and flavor—but ripens earlier.

NIAGARA—White Concord. The finest of its color for this vicinity. Good for eating and for juice.

R. W. MUNSON—Black, one of the best.

THOMPSON SEEDLESS—Small, sweet, ripens in August. 10¢ each higher than regular when ordered alone.

We ship only two year heavy plants that will grow.

JAPANESE PERSIMMONS

We consider the Hutchins best for this locality, yet can supply the trade with any standard variety. We have the Hutchins in 5 ft. trees and up only.

| | | | |
|--------------------------|---------------|-----|---------|
| 2 to 3 feet, each 40c | Dozen \$ 4.00 | 100 | \$32.00 |
| 3 to 4 feet, each 50c | Dozen 5.00 | 100 | 40.00 |
| 4 to 5 feet, each 75c | Dozen 7.50 | 100 | 60.00 |
| 5 to 6 feet, each \$1.25 | Dozen 12.00 | 100 | |
| 6 feet up, each \$1.50 | Dozen 15.00 | 100 | |

EUREKA—Medium to large, somewhat flattened, reddish-yellow; flesh brown, crisp and sweet.

HUTCHINS—Extra large, bright reddish yellow, very prolific, almost seedless.

FIG TREES

18 to 24 incheseach 25c 12 for\$2.50
2 to 3 feeteach 35c 12 for\$3.50
3 feet up, bearing sizeeach 75c 12 for\$7.50

BROWN TURKEY—Medium size, purplish-brown, sweet and good. Very prolific. Has habit of bearing on new wood, even fruiting in the nursery row.

CELESTIAL—Extremely hardy, stands lots of both heat and cold, extra sweet, fine flavor.

MAGNOLIA—Large, brownish straw color; excellent for canning and preserves. Will bear on one-year stems. Bears over a long period, having young green fruit at same time as mature, ripe fruit.

TEXAS EVERBEARING—This new fig has proven the most prolific and early bearing variety of any we have seen. Always bearing in the nursery row, on one year tree. Extra large, highly flavored, the best all purpose fig.

CHINESE JUJUBE (or Date). Tall irregular grower locust like foliage, loaded with purplish fruits 2 to 3 ft. 50¢; 3 to 4 ft. 75¢; 4 to 5 ft. \$1.25; 5 to 6 ft. \$1.75.

BLACKBERRIES, DEWBERRIES

(Listed in ripening order)

THORNLESS McDONALD BLACK—The earliest, very sweet, good size, firm, good shipper. The only thornless black we have ever seen that is worth its space. Needs Early Wonder to pollinize. 10¢ each; \$1.00 per dozen; \$3.00 per 100; \$20.00 per 1000.

EARLY WONDER BLACK—The best all purpose blackberry we have tried. Large, sweet, most productive of any except Friou everbearing, extra good for canning, juice, jelly and most any use. 10¢ each; \$1.00 per dozen; \$3.00 per 100; \$20.00 per 1000.

McDONALD BLACK—Same as thornless McDonald Black, only thorny. 75¢ per dozen; \$2.25 per 100; \$18.00 per 1000.

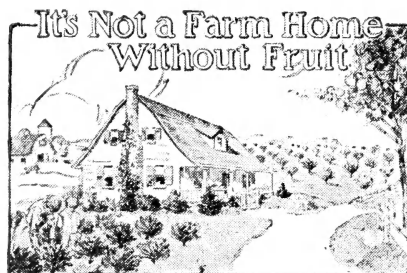

THORNLESS DEWBERRY—Extra large, somewhat tart, very prolific. Same price as Thornless McDonald.

AUSTIN DEWBERRY—The best Dewberry. Extremely prolific, extra large fruit, vigorous grower, tip plants. 50¢ per dozen; \$2.00 per 100; \$12.50 per 1000.

DALLAS—One of the oldest and still very popular. Perhaps the most universally planted, heavy producer and perhaps will come as near growing anywhere as any. 50¢ per dozen; \$2.00 per 100; \$18.00 per 1000.

LAWTON BLACK—Upright grower, berries in large clusters standing well out from plant making it very easy to pick. Delicious flavor, one of the best shippers of all black berries. 50¢ per dozen; \$2.00 per 100; \$18.00 per 1000.

KANSAS CLUSTER—Very similar to Lawton, but seems to stand drought better. 75¢ per dozen; \$2.25 per 100; \$20.00 per 1000.

YOUNGBERRIES

(Ripens one week later than Austin)

THE YOUNGBERRY—The fruit is very large and very juicy, with rich blended flavor that is pleasing to nearly everyone. The color so very dark red that it is nearly black and the seeds are few in number and soft. The vines are vigorous growers; trailing in habit, and should be trellised. The fruit is borne on long fruit stems that thrust it away from the vines ready to be picked, which makes picking very easy. If you are not growing Youngberries you should, for you are missing something. It thrives well over nearly all the United States. If you are in the commercial berry business, or if you are planning on making a planting of berries for the market, you should plant some Youngberries, because there is an insistent and growing demand for the fruit, and because you can grow them and pick them cheaper than most other varieties, and because they produce large crops regularly. These are important facts for the commercial grower to consider, because it is very discouraging to grow a crop and then find there is no market for it.

If you are growing berries only for home use, you should, by all means, have some Youngberries in your garden. You will be delighted with their large size and wonderful flavor, and you will be pleased with the ease with which they can be grown and picked. 25 plants (enough for a 150 foot row) will cost only \$1.00 delivered to you. Order now and have a fine berry garden next year. Plants are ready to ship any time after October 1st.

Plant 6 feet apart in rows spaced 6 to 9 feet apart. About 600 to 1,000 plants per acre.

Prices: 25 plants, \$1.00; 100 plants, \$3.00; 1,000 plants \$20.00.

THORNLESS YOUNG—Same as above except positively no thorns on the vines.

Prices: 25 plants, \$1.50; 100 plants, \$3.50; 1,000 plants \$30.00.

BOYSENBERRY

(Ripens one week later than Young.)

ANOTHER new berry that all who have tried are more than satisfied. Cross between Youngberry and Loganberry and just as prolific, so sweet that no sugar is required for making pies or to eat fresh. Vine very vigorous grower, requires more space than dewberries or blackberries. Should be planted at least six feet in the row and row at least 8 to 10 feet. Our supply is limited. We will sell out before the season is over. If you want Boysenberry plants you had better place your orders now. All good varieties and successful in this locality; never fail to produce fruit. Just a few vines will furnish any

family with fresh fruit and plenty for canning and jelly. A large planting will make the commercial grower more money than most any crop he can plant per acre.

Price: 25 plants, \$1.50; 100 plants, \$4.00; 1,000 plants, \$35.00.

FRIOU EVERBEARING BLACKBERRY

FRIOU (Everbearing Blackberry).—No one seems to know where this berry comes from. Many and varied accounts are given. We have been watching it for about 10 years and have decided because of its outstanding features to make it our leading variety of blackberries. We have seen it in the fields, with other varieties of blackberries that were shriveling and drying up on the vines because of dry weather, maturing extra nice, plump, delicious berries and still blooming. They begin ripening in June and at this date, August 25th, we still have green berries on the vines. They have a distinct flavor of their own which I have never seen equalled in a blackberry. They are the most vigorous grower I have ever seen, vines growing to a height of 6

to 7 feet in one year on good soil. They should be planted in rows 8 feet apart and 6 feet in the row. Then they will produce more berries than any variety I know of per acre even at this distance and if planted close will make such a growth that it will be hard to gather the berries. The vines stand up well. There will be no sand or grit on the berries. Same price as Boysen.

Blackberry, Dewberry, Youngberry and Boysenberry should be in every home planting. We have the most complete selection of berry plants to be found in Texas.

We are perhaps the largest grower of berry plants in Texas, shipping to all parts of the United States.

All Berry prices quoted above are for year old well rooted plants. We have two year old, mostly branched plants at 50% advance in price.

STRAWBERRY

Our Strawberry plants are shipped to you freshly dug. Finest plants grown. Shipped any time after October 1st.

| Variety— | 25 | 100 | 500 | 1000 | 5000 |

| Everbearing Mastodon | 90c | 2.00 | 6.00 | 12.00 | 50.00 |

PECAN TREES

WE RECOMMEND planting pecan trees for shade. They make the best, hardiest and most lasting shade we can plant and you get the nuts as an extra dividend besides the beauty.

Our pecan trees are grown in rich, deep, sandy loam. They have fine, well branched root system. They are dug fresh and shipped to you right out of the ground. You should get 90 to 100% to live with good care.

WESTERN VARIETIES

BURKETT—The Burkett nut is large, almost perfectly round, thin, soft shell, plump kernel and excellent flavor. Kernels release readily, coming out in whole halves. Early and regular bearer. Tree healthy and vigorous. Make good shade trees. No finer variety for East or West. Popular.

TEXAS PROLIFIC. Prolific variety as name implies. Tree frequently produces nuts in nursery row. Trees slender in growth. Shells are thin; long, oblong nuts tapering at both ends. Delicious flavor, plump kernel coming out easily in whole halves.

WESTERN SCHLEY—Very high quality flavor—long slender thin shell.

EASTERN VARIETIES

SCHLEY—This is the standard of excellence among pecans. The tree is healthy and is making good in the native pecan belt of Texas, Arkansas and Oklahoma in altitudes from 350 to 1,000 feet. Gaining in popularity and ripens early.

SUCCESS—Large nut with thin shell, quite round, good flavored meat, filling out well. Tree is a good bearer.

STUART—Stuart is a good bearer and the nuts are long and attractive. The shell is rather thick, but soft and the meats are sweet and brittle.

We ship only Texas grown Pecan trees. They are far superior to those shipped in from points east of the Mississippi.

WILSON WONDER, ENGLISH WALNUT and **THOMAS BLACK**, same price as pecans.

GRADE ENGLISH WALNUT, a new variety that is proving much better than Wilson Wonder in that the nuts fill much better, more prolific, and better flavor. Price 25c higher than pecans when ordered alone.

TREE SURGERY

We have experienced men for all types of tree surgery and repair. Consult us. Call us for your pruning and spraying needs. We are equipped to spray and prune all types of shrubbery or shade trees, and orchards.

ROSES

THERE is nothing that will give the satisfaction and pleasure as a well selected and well cared for rose garden. We offer our trade the best that can be grown. As cut flowers they have no rival, they have a longer flowering season than any other flower, thrive over a wider range than most any other flower, have a wider selection of colors. Do not be misled into buying cheap, puny, undersized roses because they are priced a few cents lower than ours and be disappointed with the results. Such plants are usually weak and if they survive the first summer they do not bloom freely. Ours are strong, well rooted, two year old field grown stock and will reward your efforts with an abundance of buds the first season.

Fall planting is the best for roses. We can ship any time from November 1st to May 1st, but you will have better results if you will plant as early as you can. This also applies to all nursery stock.

MONTHLY BLOOMING BUSH ROSES

If we could take you over the growing fields of roses, over a million plants, of nearly 500 varieties, you would be so delighted with beauty of bloom; enthused over the vigorous, healthy plants, we know we could sell you your full requirements for your rose garden. In making up our list of nearly 100 varieties as listed below we have selected, in our judgment, the cream of the lot, the pick of the field.

All plants we offer are strong, field grown plants, budded on Multiflora Japonica. They are true to name, large, healthy plants, easy to make live and grow, and are very long lived. We know you will be charmed with their beauty, fragrance and sturdiness.

WARNING—Cheap, puny rose bushes are worthless; they take more time and labor and produce practically nothing. Buy our strong plants for best results.

PRICES ON ALL BUSH ROSES LISTED BELOW

| | | |
|--|----------------|--------------|
| Small | 10c each | \$1.00 dozen |
| The above is the usual mail order size. We do not recommend this size but do have it in stock for those who want it. | | |
| Medium | 20c each | \$2.00 dozen |

AMI QUINARD—Very dark red buds open to semi-double blooms of deep crimson-maroon which seem to have a much deeper luster—almost black.

AUTUMN—Mingled shades of burnt orange and red.

BETTY UPRICHARD—Copper-red buds, opening to semi-double flowers of medium size.

BRIARCLIFF—Large, pointed buds, double, high-centered blooms of brilliant rose-pink.

CALEDONIA—Long, beautifully modeled buds of alabaster white.

CHARLES K. DOUGLASS—Fine buds opening to large, loosely formed flowers of striking crimson-scarlet.

COLUMBIA—Lively, bright pink, sweetly scented flowers of exquisite shape.

DAINTY BESS—Single pink. Much loved because of its translucent petals of an odd square-like shape.

DAME EDITH HELEN—A superb rose of the exhibition type, producing huge, shapely buds.

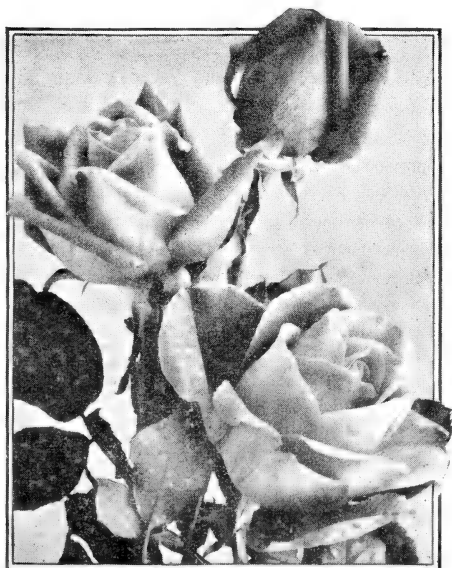

EDITH NELLIE PERKINS—Open bloom is a delightfully shaped flower of two contrasting tints, the outside of petals gleaming with bright orange-cerise and the inside overspread with orange-gold.

E. G. HILL—Large ovoid buds and immense, dazzling red flowers, shading to darker crimson without turning purple.

ETOILE de HOLLAND—Brilliant red blooms of magnificent size, perfect in half open state.

ETOILE de FRANCE—Vivid crimson flowers, with full rounded centers of bright cerise.

FRANCIS SCOTT KEY—Very large, light crimson buds and blooms of noblest form. Very double.

FRANK W. DUNLOP—Very large buds and flowers of deep, brilliant rose pink.

FRAU KARL DRUSKI—Snow white, large.

GOLDEN DAWN—Large, pointed buds of bright yellow, sometimes tinged with red.

GRENOBLE—Majestic new rose of brilliant red.

J. J. L. MOCK—Crimson buds of gigantic sizes, opening very slowly to enormous blooms of deep vinous-pink.

HADLEY—A rich crimson-red flower with velvety texture, lovely form and perfume.

JOHN RUSSELL—Large ovoid buds and immense black and crimson flowers.

K. A. VICTORIA—Well formed, creamy buds develop slowly to blooms of absolutely perfect form.

LADY HILLINGDON—Slender, pointed buds of deep saffron-yellow.

LADY MARGARET STEWART—Large exhibition bloom with enormous petals. Golden yellow.

LORD CHARLEMONT—Scarlet color. Blooms are globular, full, and upright on strong stems.

LOS ANGELES—Very lovely buds and exquisite flowers of salmon-pink, with yellow shading.

LUXEMBOURG—Yellow, shading to copper at center.

MARGARET McGREDY—Scarlet-orange or brick-red, extraordinarily vivid.

PRESIDENT HOOVER—Large, cerise-pink, flame, scarlet and yellow blooms.

RED AMERICAN BEAUTY—Dark pink, shaded with smoky carmine.

RED RADIANCE—Big, globular blooms of deep rose-red on strong canes. In every respect this rose is rated as one of the most popular roses for free blooming qualities.

ROSLYN—Charming, pointed buds of golden yellow.

SENSATION—Enormous, double, scarlet-crimson blooms of fine, deep form.

SOUV. de CLAUDIUS PERNET—Fine buds of fadeless yellow, paling somewhat toward the edge.

MRS. CHARLES BELL—Shell Pink Radiance. Lovely shell-pink buds and blooms of fine globular form with shading of soft salmon.

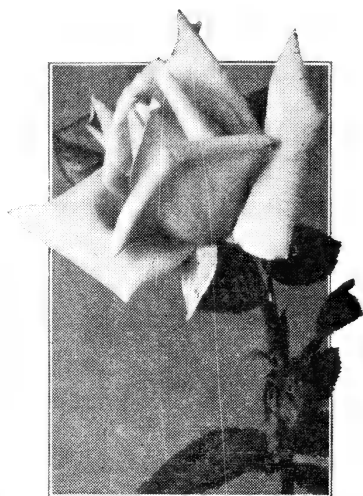

MRS. E. P. THOM—Slender yellow buds and large, well-shaped blooms of bright canary-yellow.

MRS. PIERRE S. DUPONT—Tapering, reddish gold buds and double golden flowers.

PADRE—Copper-scarlet, with bright yellow at base of petals.

PAUL NEYRON—Dark lilac-rose blooms of immense size, fair form.

MARY, COUNTESS OF ILCHESTER—One of best pink—double, intense shade of pink.

PINK RADIANCE—Brilliant rose-pink buds, opening to well-formed, shining globular flowers with lighter tints on reverse of petals.

SOUV. de GEORGES PERNET—Brick-red buds, opening to orange-pink blooms tinged with yellow.

SUNBURST—Fine, well-shaped, yellow flower, suffused with orange at center.

TALISMAN—Brilliant red and golden buds that open to beautifully shaped blooms of scarlet-orange and golden yellow.

WHITE AMERICAN BEAUTY—Superb, large, globular buds—intensely fragrant.

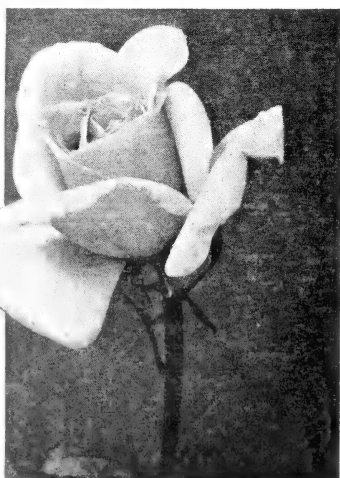

WILLOWMERE—Superb buds and blooms of richest pink, shining with a yellow glow.

POLYANTHA (Sweetheart Roses)

CECILE BRUNNER (Sweetheart Rose)—Small, exquisitely formed buds and flowers of light pink with yellow base, borne in graceful clusters.

EBLOUSSANT—Velvety scarlet flowers in large clusters.

GLORIA MUNDI—Huge clusters of small, orange-scarlet flowers of deeper tone than Golden Salmon.

CLIMBING AMERICAN BEAUTY

FLOWERING SHRUBS

PRICES: Small, 25c; Medium, 50c; Large, 75c; Extra Large, \$1.00, except where noted.

ALTHEA (*Hibiscus syriacus*).—One of our most satisfactory shrubs for the dry, hot climate of the Southwest. Blooms throughout the summer, and is most accommodating about soil or location. Can be grown in shrub or tree form. Can be furnished in the following colors: Double Red, Double Purple, Double Pink, Single Red, Single Violet, Double or Single White.

RED-LEAF BARBERRY. Same as above, except foliage is rich red, and very ornamental in any planting. Balled and burlapped: Small 75c; Medium, \$1.00; Large, \$1.50 and up.

BUDDLEIA ILE DE FRANCE (Improved Butterfly Bush)—A new, improved form of the old favorite. Long graceful spikes of dark violet-purple give color from May until frost. It is very fine as a cut flower.

CORNUS FLORIDA (White Flowering Dogwood)—A large growing shrub with beautiful white flowers of four petals, the outer edges of which are crinkled, and often tinged with a pinkish-green cast. Grows best in sandy soil, sun or shade. Fruits are most attractive to birds.

CRAPE MYRTLE (*Lagerstroemia Indica*)—The most showy, and doubtless the most loved and satisfactory flowering plant for the Southwest. Blooms continuously from June until October. The soft, fluffy flowers of crinkled crape petals are borne in dense heads. Red, purple and white. Please state color.

CYDONIA JAPONICA (Flowering Quince)—One of the most desirable early flowering shrubs grown, because of its brilliant orange-scarlet flowers which are produced in late winter and early spring before the shrub puts out foliage. Effective when planted in a group with the yellow Forsythia which blooms at the same time. Yellow fruits are produced in autumn which may be used for jellies. The plant grows about 6 feet ultimately. Extra large balled, \$1.50.

GOLDEN SALMON—Bright orange-salmon flowers in huge clusters.

IDEAL—Dense, compact bunches of small, dark scarlet blooms, shaded with black.

KATHERINE ZEIMET—Double, pure white.

MISS EDITH CAVELL—Small, semi-double, brilliant scarlet-red flowers, produced in big, compact, cone-shaped clusters.

CLIMBING ROSES

Strong two year, field grown plants.

PRICES—10c each higher than bush when ordered alone.

AMERICAN BEAUTY—Light crimson flowers, most beautifully shaped. Early spring bloomer.

COLUMBIA—Bright pink, sweetly scented flowers of exquisite shape. Free bloomer.

HERBERT HOOVER—Fine everblooming climber in rose-coral and yellow tones.

K. A. VICTORIA—Pure white, lemon center. Vigorous climbing sport of K. A. Victoria.

LUXEMBOURG—Large orange-yellow buds borne singly on long strong stems.

LADY HILLINGDON—Slender, pointed buds and elegantly cupped flowers of deep saffron yellow.

MARECHAL NIEL—Lovely buds and flowers of deep golden yellow; double and extremely fragrant.

PAUL'S SCARLET—Flowers most vivid red and last long time, clothing the plant with blazing mantle which neither blues nor blackens.

RED RADIANCE—A strong climber, in bud and bloom like bush Red Radiance.

TALISMAN—Sport of Talisman, wonderful new climber. Brilliant red and gold buds opening to well shaped blooms of scarlet-orange and rich yellow.

FORSYTHIA SUSPENSA—A rather weeping sort, that adds grace to any planting. Same characteristics and flowers as above. Extra large, balled, \$1.50.

WINTER HONEYSUCKLE—Creamy yellow flowers in January, having delightful fragrance. Very hardy, almost evergreen. Extra large, balled, \$1.50.

HARDY LANTANA—A rapid, low-growing perennial-like shrub, producing small heads of orange and yellow flowers the entire season. Very desirable for giving color in front of tall shrubs. Thrives in any soil. Orchid and Yellow variety equally as continuous a bloomer. Flowers are a combination of orchid and yellow colors. Foliage is prickly and aromatic.

PERSIAN LILAC—Flowers are a lilac-lavender color. Produces a nice crop of flowers again in autumn. Extra large, balled, \$1.50.

FLOWERING PEACH—One of our showiest early spring blooming trees, which makes a glorious sight when all the branches are covered with double, large rosettes of bright rose red flowers. Makes a tree like the fruiting peach tree but bears no fruit. Extra large, balled, \$1.50.

POMEGRANATE—Produces large, double orange-red flowers in spring. This is a fine shrub because of its glossy green foliage, and because it is so drought resistant. Sometimes bears large red fruits. Height 8 feet. Very disease resistant. Extra large, balled, \$1.50.

PURPLE LEAF PLUM (*Prunus Cerasifera* Pissardi)—A fine ornamental tree planted in back-grounds or as a specimen on the lawn, because of its handsome reddish-purple foliage all summer. Has pretty pink flowers in early spring. Extra large, balled, \$1.50.

SPIREA VAN HOUTTEI—The well known Bridal Wreath. Most graceful type, growing 5 feet high, and almost weeping in spring when loaded with masses of white flowers at end of March. Most loved of all types. Extra large, balled, \$1.50.

CORAL BERRY—An improved type of the native dwarf shrub, bearing very heavy masses of pretty coral colored berries all along the drooping stems. Extremely hardy. Grows well in sun or shade. Gives color and grace to any planting all winter. **Extra large, balled, \$1.50.**

TAMARIX (Salt Cedar)—A very rapid growing shrub or small tree, which is excellent for heavy plantings or hiding unsightly structures, grows well on any type of soil. Bears numerous spikes of lavender-colored flowers at the ends of the branches over a long season. Has sage-like aroma. **Extra large, balled, \$1.50.**

WILLOW DESERT FLOWERING WILLOW (*Chilopsis Linearis*)—A large, rapid growing shrub with soft willow-like foliage, and flowers somewhat like orchids. They are borne gracefully at the ends of the long spraying branches in clusters; are a pinkish-orchid color. Admirably suited for any planting where rapid growth and height are desired. **Extra large, \$1.50. Large plants should be balled. We have them up to 4 inches in diameter.**

RUSSIAN OLIVE (*Eleagnus Angustifolia*)—A small tree or tall, bushy shrub with silver-green foliage, almost a silvery-white on the underside. Will grow 20 feet tall in time, so is excellent to plant as a contrast in big massive background plantings or as a specimen tree. **Small, 50c; Medium, \$1.00; Large, \$1.50; Extra Large, \$2.00 and up. Should be balled.**

SALVIA GREGGI (Autumn Salvia or Scarlet Sage)—A dwarf native of Texas and Mexico. Almost evergreen. Should be pruned almost to ground each spring, to keep compact. Bears rose-colored flowers, like small trumpets all up the stems from the early spring until late frost. Should be in every planting because it is so hardy, does not require much care, and the dark green foliage with its odor of garden sage is so attractive.

EVERGREENS

We have all the following evergreens in small plants that we pay transportation on. 4 to 6 inches, 75c; 6 to 12 inches, 50c.

PFITZER JUNIPER—(*Juniperus Chinensis Pfitzeriana*)—One of the most useful conifers. Low irregular spreading form. Foliage a rich green throughout the year. Much used in foundation planting, for facing higher plants, on steep slopes and rock gardens. Very hardy. 12 to 18 inches, 75c; 18 to 24 inches, \$1.00; 2 to 3 feet, \$1.50; 3 to 4 feet, \$2.00 and up.

SPINY GREEK JUNIPER (*Juniperus Excelsa Stricta*)—Compact, symmetrical, dwarf, cone-shaped Juniper, grayish-green foliage. Easily adapted to urns and tubs or as specimens. 6 feet, 12 to 18 inches, 75c; 18 to 24 inches, \$1.00; 2 to 3 feet, \$1.50; 3 to 4 feet, \$3.00 and up.

RED CEDAR (*Juniperus Virginiana*)—The well-known native evergreen. May be trimmed to any desired shape. Its dark green color excellent for formal work. These plants are well filled, compact and legless. Have been many times sheared and root pruned. 2 to 3 feet, \$1.50; 3 to 4 feet, \$2.00; 4 to 5 feet, \$2.50; 5 to 6 feet, \$3.00 and up.

There are many other popular Junipers. If you will write us, we will give you full information about them.

GOLDSPIRE ARBORVITAE (*Biota Aurea Conspicua*)—Tall, columnar, with green foliage, tipped with golden yellow. Most conspicuous of all golden pyramidal forms. Retains its branches close to ground. 15 feet. 2 to 3 feet, \$1.00; 3 to 4 feet, \$1.50; 4 to 5 feet, \$2.00; 5 to 6 feet, \$2.50; 6 to 7 feet, \$3.00.

BAKER'S PYRAMIDAL ARBORVITAE (*Biota Bakeri*) This type does not take on character until about three feet high, when it fills out to form a pyramid, broad at base, tapering to a blunt point at top. Stands heat and drouth well. Foliage sort, light green. Small, 50c; 2 to 3 feet, \$1.00; 3 to 4 feet, \$1.50; 4 to 5 feet, \$2.00.

ROSEDALE ARBORVITAE—Grayish feathery globed type evergreen. 12 to 18 inches, 50c; 18 to 24 inches, 75c; 2 to 3 feet, \$1.25; 3 to 4 feet, \$1.75.

DWARF POMEGRANATE

This fine new flowering shrub is a real addition to the plant list of southern plants. Fine textured leaves, bright red flowers and heavy fruit all on the plant at one time combine to give a very pleasing effect. Mature height about 4 feet. Not hardy or recommended north of Denton. A fine plant for landscape work.

Balled: Small, 50c; Medium, 75c; Large, \$1.00; Extra Large, \$1.50 and up.

MIMOSA—A most interesting shrub of irregular spreading branches, having fine feathery, light green foliage, and unusual pink flowers, borne at tips of branches in early summer. The silky flowers resemble tassels of corn-silk. Grows about 8 feet. Very effective when planted to overshadow a pool or other garden ornament. Extra large, \$1.50. We have them up to 4 inches in diameter.

REDBUD AMERICAN (*Cercis Canadensis*)—Large shrub or small tree whose branches are completely covered with rosy-purple flowers in March before the leaves appear. A satisfactory flowering tree because it is so hardy, has no diseases, and has handsome heart-shaped leaves. Garden clubs are advocating more extensive planting of Redbuds. Extra large, \$1.50 and up. Extra large plants should be balled. We have them up to 3 inches in diameter.

SPIREA REEVESIANA—This variety produces large clusters of white flowers all up the graceful stems. Its foliage is most attractive, and assumes lovely shades of red in autumn. Medium grower. Extra large, balled, \$1.50.

BERKMAN'S GOLDEN ARBORVITAE (*Biota Aurea Nana*)—Of compact and symmetrical habit. Very desirable. Foliage yellowish-green, tipped pure gold in spring. Almost globular. One of the best of Biotas. We have very fine plants in this excellent evergreen. 12 to 18 inches, 50c; 18 to 24 inches, \$1.00; 2 to 3 feet, \$1.50; 3 to 4 feet, \$2.00.

BONITA ARBORVITAE (*Biota Bonita*)—Dwarf, globe-shaped, dark green. Suited for use in urns, at entrance to the porch, or walks, and cemetery planting. Very compact. Small, 50c; 18 to 24 inches, \$1.00; 24 to 30 inches, \$1.50; 30 to 36 inches, \$2.00.

FIELD OF BERKMAN'S GOLDEN WITH RED CEDAR AT EXTREME LEFT.

RAMSEY'S ARBORVITAE (*Biota Ramseyi*)—Tall, pyramidal, open growing. Very dark green color. Improves in appearance with age. 15 feet. Small, 50c; 2 to 3 feet, \$1.00; 3 to 4 feet, \$1.50; 4 to 5 feet, \$2.00.

DEODAR CEDAR (*Cedrus Deodara*)—The sacred tree of India. A magnificent specimen; lower branches sweeping the ground, giving the tree a stately appearance. Foliage blue-green and feathery. 15 feet. 18 to 24 inches, \$1.00; 2 to 3 feet, \$1.50; 3 to 4 feet, \$2.00; 4 to 5 feet, \$3.00 and up.

ARIZONA CYPRESS (*Cupressus Arizona*)—Compact, pyramidal growth, foliage silvery-gray. Plummy and soft. Fastest growing of the conifers. Very handsome. much desired. 20 feet. Small, 50c; 2 to 3 feet, \$1.00; 3 to 4 feet, \$2.00; 4 to 5 feet, \$3.00 and up.

CYPRESS (Italian)—Very superior strain of symmetrical upright growth, and much hardier than other cypresses. The parent tree on our grounds is twenty years old and has never been injured by cold when all other specimens were either killed outright or severely damaged by the severe cold spells we have had every four or five years. Young plants propagated from this stock were uninjured in the field while other stock was killed. Every tree is handsome and uniform in its growth. Small, 50c; 2 to 3 feet, \$1.00; 3 to 4 feet, \$2.00; 4 to 5 feet, \$3.00 and up.

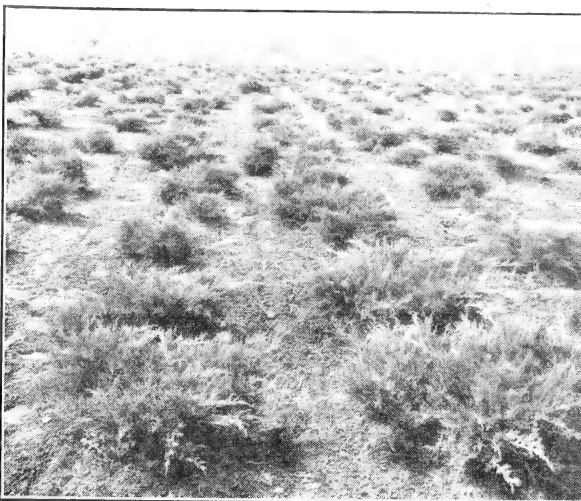

ABELIA GRANDIFLORA—One of the finest evergreens. Pinkish white flowers are produced in beautiful sprays practically covering the bush in spring and autumn, with a few all summer. Excellent when planted around the foundation of a house, or in masses or hedges. Puddled roots; Small, 25c; Medium, 50c; Balled: 12 to 18 inches, 50c; 18 to 24 inches 75c; 2 to 3 feet, 75c; 3 to 4 feet, \$1.00; heavy, \$1.50.

BUXUS SEMPERVIRENS (English Boxwood)—A true dwarf with rich deep green foliage, of dense and compact growth. Has no equal for edging, or in formal dwarf hedges. Best planted in an east exposure. Easily sheared into formal globes, squares, columns, pyramids, etc. 12 to 15 inches, \$1.00; 15 to 18 inches, \$1.50; 18 to 24 inches, \$2.00.

COTONEASTER (*Franchetii*)—Graceful plant whose dainty leaves turn a bronzy red in winter. Its bright red berries at that time make it most desirable among heavier types of evergreens. 6 feet. Small, 75c; Medium, \$1.00; Large, \$1.50.

ELEAGNUS—Beautiful evergreen of fairly rapid growth and of rather spreading habit, with silvery gray foliage and yellowish, fragrant flowers in autumn. Branches are a frosty green color with brownish mottling. 8 feet, or can be kept sheared. Small, \$1.00; Medium, \$1.50; Large, \$2.00.

EUONYMUS JAPONICA—One of the most useful evergreens for all types of landscape planting—around the foundation, for massing effect, hedges or among

FIELD OF PFITZER JUNIPERS

deciduous shrubs. Is excellent as a sheared specimen, and will succeed in almost any situation. Small, balled and burlapped, 50c; Medium, 75c; Large, \$1.00; Heavy, \$1.50. Puddled, 4 to 6 inches, 15c; 6 to 9 inches, 25c; 9 to 12 inches, 35c.

EUONYMUS PATENS—An *Euonymus* that should be more extensively used. Very hardy. Leaves turn bronze in autumn when it is covered with orange-yellow berries in interesting sprays. Can be planted in sun or shade and trained into a vine that will cling to brick or wood. Small, 75c; Medium, \$1.00.

GARDENIA FORTUNEI (Cape Jasmine)—Much prized because of its large white, very fragrant flowers, and bright glossy green leaves. A glorious crop produced in May with a scattering of flowers through the summer. Best planted in a protected spot, in well-drained sandy soil. Small, 50c; Medium, \$1.00; Large, \$1.50; Heavy, \$2.00.

JASMINE FLORIDUM (Yellow Jasmine)—Fine spreading plant with arching branches, bearing bright yellow flowers all summer. Its dainty dark, glossy green foliage is most handsome at all seasons of the year. Can be kept satisfactorily sheared for the small planting, or allowed to spread out gracefully in large extensive masses. Balled and burlapped. Small, 50c; Medium, \$75; Large, \$1.00; Heavy, \$1.50. Puddled: Small, 15c; Medium, 25c.

LAUROCERASUS CAROLINIANA (Cherry Laurel)—This fine plant makes a very large, handsome specimen, especially when sheared. Given room it will spread out into a broad, bushy tree. Splendid for tall hedges or windbreaks, and screens. Small, 75c; Medium, \$1.00; Large, \$1.50; Heavy, \$2.00 and up.

LAVANDULA, VERA (Old English Lavender)—A low, bushy round plant, whose distinctive gray color makes a pleasing accent in front of taller plants, and at porch steps. Withstands drouth well. Spikes of lavender-colored flowers with an aromatic foliage come in spring. Small, 50c; Medium, 75c; Large, \$1.00; Heavy, \$1.50.

LEUCOPHYLLUM (*Texanum, Seneca*)—A fine native evergreen with soft gray foliage growing about 5 feet high, producing delightful orchid colored blossoms in late summer. Its refreshing blossoms make a pleasing contrast among green leaved plants and conifers. Does best in a sunny, well-drained, limestone soil. Small, 50c; Medium, 75c; Large, \$1.00; Heavy, \$1.50.

LIGUSTRUM (*Japonica*)—A large upright growing shrub with broad dark green foliage much like that of a lilac, bearing white flowers in loose sprays in spring, and black berries in winter. An excellent evergreen for large screens or against large buildings. Balled and burlapped: Small, 50c; Medium, 75c; Large, \$1.00; Heavy, \$1.50 and up. Puddled: Small, 15c; Medium, 25c; Large, 35c.

FIELD OF BAKERS

LIGUSTRUM LUCIDUM (Waxleaf)—Thick, leathery, dark foliage with a wax-like sheen. This is a handsome, somewhat slow-growing broad-leaf which is excellent for use in foundation or mass plantings. Small, 75c; Medium, \$1.00; Large, \$1.50; Heavy, \$2.00.

LODENSE PRIVET (*nanum compactum*)—A dwarf plant with small dark leaves, which grows so compact that it makes an excellent dwarf hedge. Specimens are easily sheared into desired shapes for tubs or urns. Is improved by constant shearing. Balled and burlapped: Small, 50c; Medium, 75c; Large, \$1.00. Puddled: Small, 15c; Medium, 25c. The best border plant.

SPANISH BROOM—A more graceful, taller-growing type, which bears same profusion of yellow pea-shaped flowers. Plant in ample room to spread out in full beauty. Small, 50c; Medium, \$1.00; Large, \$1.50; Heavy, \$2.00 and up.

MAGNOLIA GRANDIFLORA (Southern Magnolia)—Most majestic and stately of all our broadleaved evergreen trees. Ultimate height of 50 feet. The leaves are a glossy, bright green, and the large, fragrant white flowers scattered from April through August make this tree most conspicuous. To reach its full dignity, should be planted in rich soil with ample room. Small, \$1.00; Medium, \$1.50; Large, \$2.00; Heavy, \$3.00 and up.

MAHONIA (*Acquifolia* Oregon Holly)—A beautiful low-growing evergreen with striking holly-like leaves that vary in hue from dark greens to shadings of reds and bronzes. Perfectly hardy, but is best in partially shaded spots. Has yellow flowers at the ends of the stems in spring, followed by blue berries. Excellent as a contrasting plant. Small, 50c; Medium, 75c; Large, \$1.00; Heavy, \$1.50.

NANDINA DOMESTICA—Erect growing, bamboo-like shoots, with compound, graceful leaves that are dark green in summer; after frost, turn to flaming red. Especially prized because of the great clusters of red berries in winter. Small, 35c; Medium, 50c; Large, 75c; Heavy, \$1.00 and up.

PHOTINIA SERRULATA—A large handsome shrub with slightly curled, indented leaves. The new foliage in spring is a bright red. Best used around large buildings or for heavy landscape plantings. Not particular about soil or situation. Small, 75c; Medium, \$1.00; Large, \$1.50; Heavy, \$2.00.

PYRACANTHA LALANDI (Fire Thorn)—Fast becoming one of the most popular of the larger growing evergreens, because of its handsome, upright branches, and glowing masses of orange berries all winter. Most attractive in spring when fairly loaded with masses of tiny white flowers. Makes a fine hedge plant when pruned or can be trained over arbors. Small, 50c; Medium, 75c; Large, \$1.00; Heavy, \$1.50 and up.

PYRACANTHA (*Yunnanensis*)—A spreading type with red berries, and dark green leaves. Fine to plant in front of the tall growing type for contrasts. Is Graceful when growing over rock walls or embankments. Small, 50c; Medium, 75c; Large, \$1.00; Heavy \$1.50 and up.

ROSEMARY (*Rosmarius Officinalis*)—A pretty low growing herb-like gray shrub with pleasant aroma, and bright blue flowers appearing at the axils of the narrow leaves up the stems in spring. Will grow on even the poorest soil, and is most effective in clumps. Small, 50c; Medium, 75c; Large, \$1.00; Heavy, \$1.50 and up.

LAVENDER COTTON (*Santolina*)—A low, round clump of soft, gray foliage, making nice compact clumps or for edgings around flower beds, or for cemetery borders. Does best in dry sunny locations, and seasonal shearing keeps it more compact. Yellow flowers in spring. Balled and burlapped: Small, 50c; Medium, 75c; Large, \$1.00; Heavy, \$1.50 and up. Puddled: Small, 10c; Medium, 15c; Large, 25c; Heavy, Big 50c. Good border plant.

All evergreens balled and burlapped except where noted. We do not pay transportation on balled plants.

We have many other varieties in evergreens. Write us your needs for special prices, or better, come to the nursery and select them.

ROCK GARDENS

Are you thinking of a rock garden or a pool on your grounds? We are well equipped to draw you plans, do the work, and furnish just the type of plants most suited to the landscape.

HEDGE PLANTS

| | | | | |
|-----------------|-----------|--------|---------|---------|
| 6 to 12 inches | per dozen | 35c | per 100 | \$ 2.00 |
| 12 to 18 inches | per dozen | 50c | per 100 | 4.00 |
| 18 to 24 inches | per dozen | 85c | per 100 | 6.50 |
| 24 to 30 inches | per dozen | \$1.00 | per 100 | 7.50 |
| 30 to 36 inches | per dozen | 1.50 | per 100 | 10.00 |
| 36 to 48 inches | per dozen | 2.00 | per 100 | 12.50 |

Extra large specimen plants, well branched, 5 feet, 50c each; 6 feet, 75c each.

ARMOUR RIVER PRIVET is the best hedge plant for the South. It forms a living wall or hedge, which may be sheared or left natural.

CALIFORNIA PRIVET is used extensively in warmer sections of South. Broad leaf, stands shearing well.

LODENSE PRIVET

The best plant for a low dense hedge or border. Can be sheared to as low as 3 inches, or if allowed to grow will attain a height of 2 to 3 feet.

PRICES

| | |
|------------|----------|
| 4 to 6 in. | 15c each |
| 6 to 8 in. | 20c each |

GRASSES

PAMPAS—Long silver plumes. Small, 50c to \$1.00; Medium Large, \$1.50; Extra Large, \$2.00.

SHADE TREES

SHADE trees are indispensable around your home. Our trees are Nursery Grown and not dug out of the woods.

PRICES ON SMALL HEDGE SIZE SHADE TREES

| | | |
|-----------------------|----------------------|-------------------|
| 18 to 24 inches | \$2.25 per 100 | \$20.00 per 1,000 |
| 2 to 3 feet | 3.50 per 100 | 30.00 per 1,000 |
| 3 to 4 feet | 5.00 per 100 | 40.00 per 1,000 |

These are spindling, mostly straight well rooted trees, not to be compared with the shade trees listed below for yard planting, but they will grow if given a chance. Some buy them for shade trees. We do not sell less than 100 trees at above prices. If smaller quantity wanted, the price is 5c, 10c, and 15c each, respectively. Our shade trees are grown and dug right; they will take root and grow.

PRICES ON REGULAR SHADE TREES

| | |
|---------------------|-------------|
| 4 to 6 feet | 25c each |
| 6 to 8 feet | 50c each |
| 8 to 10 feet | 75c each |
| 10 to 12 feet | \$1.00 each |

(These prices prevail except where noted)

AMERICAN ELM (*Ulmus Americana*)—An excellent native tree; with a broad spreading head which makes a splendid shade tree. It is long lived and hardy.

ARIZONA ASH (*Fraxinus Velutina*)—This is another good shade tree for our dry, hot climate. Has attractive green foliage.

BLACK LOCUST—Tall, shapely, fast growing, spreading, covered in early spring with pea shaped blossoms. Very fragrant.

CATALPA SPECIOSA—Rather open-growing habit, spreading. Extra large leaves dark green in color. Blooms in early spring. Large bell-shaped flowers, followed with long bean-like pods.

CHINESE ELM (*Ulmus Pumila*)—A remarkable tree because of its great rapidity in growth; bright, fresh-looking foliage and compact shape. Stands drouth or cold, and retains its foliage until quite late in autumn.

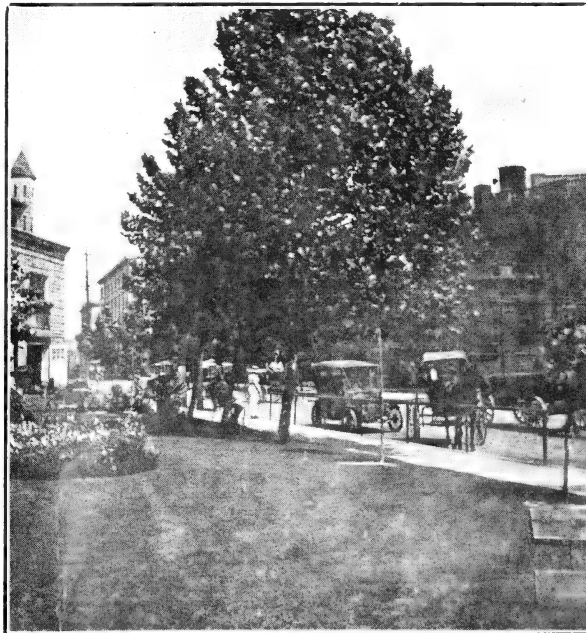

HACKBERRY (*Celtis Mississippiensis*)—Probably the sturdiest tree for all situations. Stands difficult city conditions better than most trees, and is more disease resistant. Is immune to cotton root rot sometimes found in the soil.

TEXAS UMBRELLA CHINA (*Melia Azederach Umbraculiformus*)—This is a very quick growing tree; most useful for children's play boxes because of its dense shade. Umbrella shaped head.

SYCAMORE (*Platanus Occidentals*)—Very easily grown, giving quick shade and making a handsome tree, with well formed head, and interesting white bark.

LOMBARDY POPLAR (*Populus Nigra Italica*)—Tall, column-shaped tree, which is very effective used as a background or accent.

WEeping WILLOW (*Salix Babylonica*)—A most graceful tree with long drooping branches and narrow willow-like light green leaves. Most effective when used near water or out on the lawn.

SYCAMORE

BULBS

AMARYLLIS—Large red lily-like, flowers in early spring and again in the fall. 25c each; \$2.50 per dozen.

CRYNIMUM LILY (Milk and Wine)—Creamy, lily-like blooms with wine-colored stripes. Blooms in summer and fall. 15c each; \$1.50 per dozen.

HYBRANTHUS—Bright red flowers in clusters in September. 15c each; \$1.50 per dozen.

TUBEROSES—White lily-shaped blooms on long stem from bottom to top. Grows about 18 inches high. Very fragrant and long lasting. Blooms continuously from June until frost. 10c each; \$1.00 per dozen.

CANNAS—Yellow King Humbert, orange with scarlet throat. 10c each; 75c per dozen. President, large red; 10c each; \$1.00 per dozen. Apricot, 15c each; \$1.50 per dozen. Eureka, dwarf pink, large blooms, 15c each; \$1.50 per dozen.

GLADIOLI—All colors. State color desired. No. 1 bulbs, 5c each; 50c per dozen.

TULIPS—All colors. State color desired. No. 1 bulbs 7c each. 75c per dozen.

HYACINTH—All colors. State color desired. No. 1 bulbs, 15c each; \$1.50 per dozen.

CROCUS—All colors. State color desired. No. 1 bulbs, 5c each; 50c per dozen.

NARCISSI—Paper whites for growing in bowls with gravel and water. 10c each; \$1.00 per dozen.

KING ALFRED—Outdoor growing. Large trumpet golden yellow. 15c each; \$1.50 per dozen.

DAHLIA—All colors. State color desired. 15c each; \$1.50 per dozen.

We can furnish you with any variety bulbs desired. If you do not see what you want, write us.

Full line bedding plants in spring. Write us. Also perennials such as hardy phlox, stocks, chrysanthemums and many others. If it is to be had we can supply you and at a very reasonable price.

SPINELESS CACTUS—Good for rocky corners, shade, or anywhere desired. Will grow anywhere. Some recommend growing as feed for cattle, sheep and other stock. Slabs, 10c each; \$1.00 dozen. Write us for quantity prices.

OLD FASHIONED SAGE—Why not grow your own sage? Grandmother did. Good strong divisions. 15c each; \$1.50 per dozen.
